EDUCATION

Tecnológico de Monterrey

B.Sc. in Data Science and Mathematics Engineering (GPA: 96/100)

Guadalajara, Mexico

Aug 2022 – Jun 2026

EXPERIENCE

AI Engineer | Data Scientist

JateNX

Feb. 2024 – Present

Guadalajara, Mexico

- Architected and deployed multi-model chatbot integrating Claude, OpenAI, and Gemini APIs, serving 3,300+ users across education and enterprise environments.
- Built RAG system using Pinecone + Gemini API for candidate recommendation, structuring applicant and job listing data through semantic search; deployed to 3,000+ users, improving hiring efficiency and match accuracy.
- Led technical requirements gathering with 4+ enterprise clients, translating business needs into scalable AI systems and production-ready solutions.

Data Engineering Intern

HERE Technologies

Oct. 2025 – Dec. 2025

Guadalajara, Mexico

- Automated Jira data extraction pipeline on AWS Lambda, consolidating multi-stage extraction (Projects → Dependencies → Status) into unified DynamoDB table schema, eliminating 3 intermediate transformation steps.
- Reduced query complexity from multi-join operations to single-table scans, enabling real-time frontend visualization of project metrics and cross-team documentation.
- Wrote OpenAPI documentation and designed scalable Extract-Transform-Load (ETL) workflow, improving data accessibility and team productivity across 50+ internal projects.

Research Intern — Mitacs Globalink

Université du Québec à Montréal (UQAM)

Jul. 2025 – Oct. 2025

Montreal, Canada

- Compared stochastic, deterministic, and reinforcement learning approaches for hospital inventory optimization; identified 2% cost reduction and trade-offs between efficiency, resilience, and scalability.
- Analyzed resource allocation strategies under demand uncertainty, delivering actionable recommendations for hospital clinic operations and budget planning.

PROJECTS

Dispatch | AI Agent CLI Framework — Python, LLMs, Tool Calling

Portfolio

- Built lightweight Python CLI agent with unified abstraction layer for Ollama and OpenAI-compatible providers, enabling interchangeable backends, tool calling, streaming, persistent memory, and CI-validated releases.
- Engineered MoE-aware planning feature (/plan) for local LLMs by decomposing complex tasks into guided reasoning steps, reducing prompt-trajectory locking during expert routing.
- Open-source. 35+ GitHub stars, 7+ forks, and 350+ PyPI downloads. GitHub: [santiagomora2/dispatch](#)

POI Validation Tool — Guadalahacks 2025 (1st Place) | Geospatial Analysis, Deep Learning

May 2025

- Won 1st place among 30+ teams with CNN-based tool to validate Points of Interest (POIs) against HERE Maps specifications using geometrical analysis and satellite imagery classification.
- Improved geospatial data quality for navigation and urban planning by combining rule-based checks with deep learning on HERE API imagery.

Client Payment Prediction and Segmentation — Bradescard | Machine Learning

Jun. 2025

- Implemented ABC segmentation and predictive models (Random Forest, Neural Networks, Bayesian) to classify payment behavior and enable proactive engagement for high-value clients.

TECHNICAL SKILLS

Languages: Python, R, C++.

ML/AI: LLMs, RAG, AI agents, vector databases, PyTorch, TensorFlow, scikit-learn, statistical modeling.

Backend: FastAPI, REST APIs, AWS Lambda, DynamoDB, Docker, OpenAPI, ETL pipelines, data architecture.

Developer Tools: Git, GitHub, Linux, VS Code, Jupyter Notebook, MLflow, L^AT_EX, RStudio.
